# NATIONAL SKILLS COALITION 

Every worker. Every industry. A strong economy.
February 19, 2019

## TO: Interested Parties <br> FROM: National Skills Coalition <br> RE: Poll Finds Overwhelming Support for More Funding for Skills Training

On behalf of the National Skills Coalition, ALG conducted a nationwide online survey of 1000 likely 2020 general election voters, January 22-27, 2019. The purpose of this memo is to review the key findings from the survey.

## Key Findings

- Voters overwhelmingly support increasing investment in skills training. More than nine-out-of-ten voters ( $93 \%$ ) support increasing investment in skills and technical training, with a majority of voters strongly supporting more investment.
- Increasing investment in skills training was the most popular of eight economic proposals tested. At 93\% support, increasing investment in skills training was more popular than other popular economic policy proposals such as cutting taxes for the middle class $(88 \%)$, providing Medicare to all Americans ( $71 \%$ ), raising the minimum wage to $\$ 15$ ( $66 \%$ ) and free tuition for four-year public colleges ( $60 \%$ ). More investment in skills training was the most popular proposal among Independents (93\%) as well.

- Support remains extremely high even when investment is framed as "government funding." Noting that increased funding for skills training would come from the government does little to dampen support, with $85 \%$ of voters continuing to back it. This sentiment extends across party lines, with $90 \%$ of Democrats, $82 \%$ of Independents and $80 \%$ of Republicans in support.
- African American voters are especially supportive. Ninety percent of African American voters support more government funding for skills training, but support is very high among white voters (85\%) and Latino voters as well (81\%).
- Supporting more investment in skills training helps candidates of both parties. By a 50 -point margin ( $59 \%$ more likely / $9 \%$ less likely), voters say they are more likely to support a candidate who supports increasing government funding for skills training. This positive impact extends across the political spectrum.
- There is strong, bipartisan support for a range of proposals related to skills training. At least $80 \%$ of voters support each of the eight skills training proposals tested in the poll. These proposals include providing tax incentives for employers who invest in skills training ( $90 \%$ ), making federal financial aid to anyone seeking skills training ( $86 \%$ ), and making it easier for those on government assistance to get skills training (85\%). All eight proposals tested enjoyed broad support across party lines.
